

Java

```
class Solution {  
    public String reversePrefix(String word, char ch) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {string} word  
 * @param {character} ch  
 * @return {string}  
 */  
var reversePrefix = function(word, ch) {  
  
};
```

TypeScript

```
function reversePrefix(word: string, ch: string): string {  
  
};
```

C++

```
class Solution {
```

```
public:
    string reversePrefix(string word, char ch) {

    }
};
```

C#

```
public class Solution {
    public string ReversePrefix(string word, char ch) {

    }
}
```

Kotlin

```
class Solution {
    fun reversePrefix(word: String, ch: Char): String {

    }
}
```
